

Environmental Policy

With our service offering of repair and assembly exchange, we offer our customers resource-conserving services. In this way, we actively support our customers in the area of environmental protection.

The following principles apply to the environmental policy of CTDI Europe:

1. We assume social responsibility. Effects on the environment and people constitute the focus of our actions.
2. For us, environmental protection has high priority. Therefore, the management directly assumes responsibility for establishing and implementing the environmental policy guidelines.
3. Using a modern environmental management system according to DIN EN ISO 14001, we ensure that our environmental policy is implemented effectively.
4. We carry out forward-looking environmental protection. Complying with the relevant environmental laws and regulations and other requirements is a matter of course.
5. We work on continuous improvement of environmental protection in our company.
6. Our purchasing policy takes the objectives of environmental protection into account. They also affect our behavior in dealing with our contractual partners.
7. We strive for energy-saving and resource-conserving solutions for our services.
8. By actively including all employees in our measures for protection of the environment, we encourage environmentally conscious thoughts and actions.
9. We inform the public and promote a constructive dialogue in this way.

Malsch, 26 April 2018

Dieter Hollenbach
Chief Executive Officer

Klaus Olma
Quality and Environmental Management Officer
